Introduction

The course will give an introduction to project management. The students will be given an understanding of what a project is and a foundation for planning, organizing and controlling projects. The course will further develop the students' knowledge about the problems of project work and will, by the help of theory and practical examples, show how to plan, organize, manage and control a project to achieve the goals set.

Please note!

This course overlaps with a group of subjects in the Norwegian course "Prosjektledelse" (7,5 credits) and the specialization course "Project Management" (15 credits). Consequently a combination of these courses can not be approved in a Bachelor's degree.

Learning outcome

Acquired knowledge:

- The students have knowledge about how to start, plan, organize, manage risk, manage stakeholders, follow up, and terminate a project.
- The students understand the role of projects in developing a private or public organization.
- The students are familiar with project management language, processes, techniques and methods.
- The students understand that there are many different types of projects, which may be treated differently.

Acquired skills:

- The students are able to use several project management tools and techniques, for example: milestone planning, network planning, risk analysis and stakeholder analysis.
- The students are able to take an active part in projects.

Reflection:

- The students are able to reflect on the ethical problems associated with the organization of projects.
- The students are able to understand what it means to participate in a project team and show respect for other team members' knowledge, opinions, roles and personality.
