Department of Marketing

Term

According to study plan

ECTS Credits

9

Language of instruction

Norwegian

Introduction

Objective

This course is designed towards providing an understanding of marketing planning which leads to developing strategies for successful product management. There are two parts to the course. The first consists of market planning where the focus is on analysis of information pertaining to a product's environment, customers and competitors. The second part of the course builds on this foundation to familiarise students with the complexities of product strategy and management. Product strategy lies at the very heart of the firm's overall strategy and must occupy a dominant role in the firm's planning and actions. For this, an in-depth knowledge of the nature and practice of product management and strategy is necessary. Product management will be studied starting with the important theoretical foundations of product classification, buyer behaviour, product life cycle and product portfolios. Students will then be coached in the steps of developing new products and managing them from launch to growth to maturity to elimination. The overall thrust of this course is to make the student understand the link between market planning and product management.

Prerequisites

The course is based on the knowledge of marketing that the students have acquired from other marketing courses in their studies
