Language of instruction

English

Introduction

Objective

The students will familiarize themselves with important concepts in Monetary Economics. What factors determine the rate of interest, the rate of inflation and the exchange rate? How do these three prices relate to one another? Although the theory may be fairly simple, logical and straightforward, empirical research tells us that the exchange rates and interest rates quite often behave unpredictably, creating challenges for politicians and central bankers as well as for the agents in financial markets. This course also offers insights into real world phenomena, like the consequences of liberalizing the credit market and allowing capital to travel across borders. Monetary policy in the US, in the EU, and in China is also on the agenda.

Prerequisites

Good understanding of basics in Macro and Micro Economics

Compulsory reading

Books:

Mishkin, Frederic S. 2010. The economics of money, banking and financial markets. 9th ed. Boston : Prentice Hall. Kommer med "MyEconLab XL" og får pakkenummer 9781408245804.
