Introduction

This course offers a thorough introduction to the most common ways to employ and trade ships and an examination of the relevant types of contracts and of the commercial application of these contracts. It is aimed at students who wish acquire theoretical and commercial understanding and knowledge on the available methods for employment of vessels and on how the work related to employment is carried out within shipowner companies, ship-broking firms and importers and exporters of goods.

Learning outcome

Acquired knowledge

After the course students shall have:

- Learned the different ways of employing and trading ships
- Gained knowledge on the roles of the range of parties involved in the employment and trading of vessels and the roles of these parties
- Learned about the relevant contracts and on the crucial clauses in these contracts
- An insight in the practical challenges and problems that may arise in the employment of ships and how to find practical and commercial solutions on these challenges and problems.

Acquired skills

After completed course the students will be able to:

- Explain the methods for employing ships in the market and the characteristics of the f the types of contracts used.
- Discuss and analyze the most important clauses in the above contracts
- Understand the roles of the parties involved
- Identify and understand the practical and commercial challenges involved in the employment of vessels in the market and how to find feasible solutions
- Perform drafting of the relevant contracts and related documents

Reflection

During the course the students should develop recognition of transport of goods on ships as an element in international trade and in the logistics related to such trade. Furthermore they should be able to reflect on the involved parties' commercial, operational and technical needs and requirement when entering into contracts for the transportation of goods on ships.
